Lab Report No: 04

Lab Report on: Introduction to Mininet.

Name: MD. ARAAFAT ISLAM

IT 17008

Objective: In this lab we will learn about installation process of Mininet in Linux. After completion of installation .Apply some mininet command from Mininet Workthrough.

1. Installation process:

\$ sudo apt-get install git

```
binodon@binodon-HP-EliteBook-8470p:~/mininet$ sudo apt-get install git
[sudo] password for binodon:
Reading package lists... Done
Building dependency tree
Reading state information... Done
git is already the newest version (1:2.17.1-1ubuntu0.7).
The following packages were automatically installed and are no longer required:
   efibootmgr gir1.2-geocodeglib-1.0 libfwup1 libllvm9 libpython-all-dev
   libpython-dev libpython2.7-dev python2.7-dev ubuntu-web-launchers
Use 'sudo apt autoremove' to remove them.
0 upgraded, 0 newly installed, 0 to remove and 32 not upgraded.
1 not fully installed or removed.
After this operation, 0 B of additional disk space will be used.
Do you want to continue? [Y/n]
```

2. \$ sudo mn

```
binodon@binodon-HP-EliteBook-8470p:~/mininet$ sudo mn

*** Creating network

*** Starting CLI:
mininet>
```

3. mininet> help

```
mininet> help
Documented commands (type help <topic>):
______
       gterm iperfudp nodes pingpair
                                                               switch
                                                       DV
dpctl help link
dump intfs links
exit iperf net
                     noecho
                                        pingpairfull
                                                      quit
                                                               time
                         pingall
                                        ports
                                                       sh
                        pingallfull px
                                                       source xterm
You may also send a command to a node using:
 <node> command {args}
For example:
  mininet> h1 ifconfig
The interpreter automatically substitutes IP addresses
for node names when a node is the first arg, so commands
like
  mininet> h2 ping h3
should work.
Some character-oriented interactive commands require
```

4. mininet> nodes

```
mininet> nodes
available nodes are:
c0 h1 h2 s1
mininet>
```

5. mininet> net

```
mininet> net
